

Bridge Gem (v3.0.20) Release Notes

2025-05-31 v3.0.20

New Features

1. Supports upload of Hand Records to Tabletop Scoring systems (eg Bridgemate).
See note 1 below.
2. Supports TabScore2 (out of the box) instead of TabScore.
See note 2 below.

Bug Fixes

1. Improved error handling and logging of Email Results
2. Fixed bug which truncated Results Email when there are more than 15 teams
3. New version of User Guide '**Running an Event**' to describe feature (1) above

Notes

1. The uploading of Hand Records to the Tabletop Scoring system enables some of these systems (eg Bridgemate) to check the validity of the Lead Card when entered as part of the Result.
2. When installing Bridge Gem (v3.0.20 and later) for the first time, selecting TabScore as the Tabletop Scoring system will launch the TabScore2 app.
However if upgrading from an earlier version of Bridge Gem to v3.0.20, Bridge Gem will 'remember' the earlier version of the TabScore app. So it is wished to upgrade to TabScore2, this needs to be configured manually through the **Settings** window.
