6. Updated version of user guide '**Bridge Gem Settings**'
7. Updated version of user guide '**Running an Event**'
8. Updated version of user guide '**Viewing & Editing Movement Details**'

Bug Fixes

1. Improved Player Movement Instructions in View Movement form

This release provides control over whether Deal files are uploaded to Bridgewebs and control over whether lead cards are validated by BridgeMate Terminals.

It improves the action of double-clicking on a Player in the '**Players**' tab in the Section in Progress form: if a Player's Id cell is double-clicked, Bridge Gem interrogates the EBU's database to get the Player's name, and if the Player's name cell is double-clicked, Bridge Gem's '**Players**' form is displayed to allow the Player to be selected.

The font's in the '**Player Instructions**' tab in the '**View Movement**' form are enlarged to aid reading. This form may be displayed whilst an Event is in progress to guide players to their next table at the end of a round.
