

Bridge Gem (v4.1.25) Release Notes

2026-05-12 v4.1.25

Release 4.1.25 runs over a recent version of Microsoft's runtime platform: .NET 10. Previous versions of Bridge Gem ran over .NET Framework 4.7.2, which is much older. This change future proofs Bridge Gem.

When Bridge Gem v4.1.25 is first run on a PC that does not have .NET 10 installed, the system will give you the opportunity to install .NET 10.

Follow the instruction to download the .NET 10.0.7 Installer and then, when downloaded, run the installer to install .Net 10.

Also, Bridge Gem v4.1.25 launches an application called **Database Creator** to create the interface between Bridge Gem and any Results Reporting application that you are using. This is a new (mini) application which your anti-malware software (eg Norton) may decide to check when it is run for the first time. Just let it proceed with this check, and then re-start Bridge Gem.

New Features

1. A user reports that Bridge Gem runs on Macintosh PCs over a Window's Emulator, such as VMware's Fusion app.

Bug Fixes

1. Bug in uploading Deal files to Bridgewebs fixed
2. Bugs in navigation between cells when manually correcting Results fixed
3. Bugs in the calculation of Match Points when an Historic Event is opened fixed
