

## Multi-section Events

**Bridge Gem** supports Multi-section Pairs Events. There is no (theoretical) limit to the number of sections that are supported, although there is, of course, a practical limit.

Multi-section Events are started in the same way as single section Events, by clicking on the **New** option in the **Event** menu of the **Main** form. The **Event** form is displayed.

The screenshot shows the 'Event 1 - Duplicate ( New )' form. The form is titled 'Event 1 - Duplicate ( New )' and has tabs for 'Manage' and 'Upload'. The 'Event Name' is 'Duplicate', 'Date' is '13-Jan-2024', 'Event Type' is 'Pairs', 'Director' is empty, 'Scoring Method' is 'Match Points', 'Scorer' is empty, 'Sections' is '3', and 'Number of Winners' is '1'. Under 'Multi-section Scoring', 'Across the Field' is selected. There are three tabs: 'Section A', 'Section B', and 'Section C', with 'Section C' selected. The 'Section C' tab shows 'Number of Pairs' as '6', 'Number of Rounds' as '3', and 'Boards per Round' as '2'. Below this is a 'Recommended Movement' section with 'Number of Tables' as '3', 'Number of Boards' as '6', and 'Movement Name' as 'Mitchell 3T 3R 1W'. There is also an 'Arrow Switched Rounds' field with '1'. At the bottom of the form are buttons for 'Start', 'Remove', 'Save Event', and 'End Event'.

Select the number of sections in the event, using the **Sections** control on the righthand side towards the top of the form.

As the number of sections is increased an additional **tab** is added to the sections part of the **Event** form.

Sections are added to an event using the **Sections** control, and are removed using the same control. They can also be removed using the **Remove** button in the **Section** tab.

When an Event contains more than 1one section:-

- Extra Section **tabs** are added to the **Event** form; one for each section
- In addition to there being one **tab** for each section, an additional **tab** is added. It provides overall control of all the sections in the event. This tab is labelled **Across the Field** or **MultiSection** depending on what type of multisection scoring is required.
- A **Multi-section Scoring** groupbox is displayed just below the **Sections** control. The **Multi-section Scoring** groupbox allows the scorer to define whether **Across the Field** or **In Section** scoring of the multi-section event is required.

The **Section** tabs labelled '*Section A*', '*Section B*' etc provide exactly the same interface as that in a single section event. The various sections are set up and started using these tabs as described in the user guide, [Running an Event](#).

### Across the Field, Multi-section Events

Clicking on (selecting) the **Across the Field** tab displays an overview of all the **Sections** in the **Event** as shown below.

The screenshot shows a software interface for creating a new event. The title bar reads "Event 1 - Duplicate (New)". The interface includes several input fields and dropdown menus for event configuration. Below these is a "Multi-section Scoring" section with two radio button options: "Across the Field" (selected) and "In Section". At the bottom, there are tabs for "Section A", "Section B", "Section C", and "Across the Field". The "Across the Field" tab is active, displaying a table with the following data:

Section	Tables	NS Teams	EW Teams	Rounds	Boards	State
A	1 - 3	1 - 6	n/a	3	6	Not_Started
B	4 - 6	7 - 12	n/a	3	6	Not_Started
C	7 - 9	13 - 18	n/a	3	6	Not_Started

Below the table are buttons for "View", "Save Event", and "End Event".

The **View** button near the bottom of the form is disabled until at least one of the **Sections** is started.

Once one or more of the **Sections** has been started, clicking the **View** button on the **Across the Field** tab displays the **Section In Progress** form for the complete **Event**.

The **Multi-section** version of the **Section In Progress** form is very similar to the single section version, with the following differences:-

- It contains only the **Board** and **Results** tabs
- The above tabs display the combined scores and results from all sections

Corrections to Board results may be made in either the Boards tab of the **individual** section, or in the Boards tab of the **Multi-section** Section in Progress form. Correction made in the **single** section form are transferred to the **multi-section** form, and visa-versa.

The figure on the next page illustrates the four **Section In Progress** forms that are displayed when a 3 section multi-section event is in progress (1 form for each section, and 1 for the combined sections).

### Closing an Across the Field Multi-section Event

Ending a **Multi-section Across the Field** event is similar to closing a single section event.

The individual sections must first be ended as normal by clicking on their **End** buttons. However their **Save** buttons remain disabled.

When all sections have been ended, the **Save All** button on the **multi-section's** Section In Progress form is enabled. [Clicking this button saves all the Sections and the EEvent](#). The **Close** button on all the individual sections' forms are displayed, and the sections' forms can be closed at will.

After all the **Section In Progress** forms have been closed, the **Event** can be uploaded to Bridgewebs and the EBU, and then closed in the normal way. See the user guide, [Running an Event](#).

### In Section, Multi-section Events

**Bridge Gem** also support Multi-section Events that are scored **In Section**.

Such Events are treated in a very similar way to **Across the Field** Multi-section Events; an extra tab is added to the **Event** form for each Section in the Event, as well as an additional tab, labelled **MultiSection**.

The **MultiSection** tab differs from the **Across the Field** tab in that it lacks the **View** button, as each section is scored independently of the others, and there is no need for a **Section In Progress** form to control all the Sections in the Event.

Sections are Started and Ended in the normal way, independently of each other, as described in the user guide [Running an Event](#).

However the Saving of an **In Section** Multi-section Event is slightly different: Sections (and the Event) cannot be saved until all Sections have been Ended. Until all Sections have been ended the **Save** buttons on all **Section In Progress** forms remain disabled. Once the last section is saved, the **Save** buttons on all sections become enabled, and clicking on any one of them saves **all** the Sections and the Event. The **Close** button on all the individual sections' forms are then displayed, and the sections' forms can be closed at will.

After all the **Section In Progress** forms have been closed, the **Event** can be uploaded to Bridgewebs and the EBU, and then closed in the normal way.
